DRILLING RESULTS EXTEND MINERALIZATION OF EL COMETA – EL REFUGIO ZONES AT COPALQUIN, DURANGO MEXICO

February 8th, 2005, Vancouver, British Columbia; UC Resources Ltd. (TSXV: UC) and Planet Explorations Inc. (TSXV: PXI) are pleased to report the latest results from the Company's 7,005 hectare (17,401 acres) Copalquin property in Durango, Mexico. The Copalquin property lies within Mexico's prolific Sierra Madre mineralogical belt and covers a total of 23 historic high-grade gold and silver occurrences. According to Wilkins report, 1997, historic production from Copalquin is estimated at over 200,000 ounces gold and 8.7 million ounces of silver mined primarily before the Mexican revolution (pre-1910).

The latest results from the joint venture drill program (previously announced in the January 18th, 2005 news release) show that the high-grade El Cometa zone continues to extend northward and that a new zone has been discovered west of the El Cometa zone.

The new zone, called the El Refugio zone, is located 350 metres west of the El Cometa zone and is thought to be an extension of it. Results to date are considered very favorable because they support UC's and Planet's theory that the Copalquin property has potential to host high grade vein deposits within larger, lower grade mineralized breccia zones.

The El Cometa and El Refugio zones represent only two of 23 known mineralized zones on the Copalquin property all of which produced gold and silver using primitive mining techniques (pre Mexican revolution, 1910). Follow up work in 2005 will include infill drilling within the 350 meter region between the El Cometa and El Refugio zones. In addition the company plans to drill test other historic mineralized and productive areas and carry out an evaluation of previously unexplored parts of Copalquin.

Highlights from UC's most recent assays include:

UC-14 intersected 11.57 metres of 3.01 g/t gold and 300.55 g/t silver including 2.13 metres of 13.65 g/t gold and 1375.00 g/t silver recently discovered on El Cometa's northern extension.

UC-21 intersected 10.11 metres of 2.20 g/t gold and 199.90 g/t silver recently discovered on the new El Refugio zone 350 metres west of El Cometa.

Highlights from UC's previous drilling include:

UC-03 intersected 5.52 metres of 114.26 g/t gold and 328.63 g/t silver previously drilled by UC Resources on El Cometa.

To date the company has received results for a total of 22 drill holes completed from five drill pads. Results for UC-01-07 drilled from Pad #1 at the El Cometa prospect were released on Dec 1st, 2004. The following table summarizes the results from Pad #1 and the results from Pad #2-5.

Drilling Summary

	From (m)	To (m)	Length (m)	Au (g/t)	Ag (g/t)
UC-01	29.20	35.95	6.75	1.07	131.04
UC-03	35.48	41.00	5.52	144.26	328.63
UC-04	40.18	45.95	5.77	12.13	119.36
UC-10	33.37	34.42	1.05	2.33	108.00
UC-13	48.68	55.46	6.78	0.80	51.14
Incl	54.35	55.46	1.11	3.45	262.00
UC-14	42.68	54.25	11.57	3.01	300.55
Incl	48.43	50.56	2.13	13.65	1375.00
UC-15	39.30	49.75	10.42	1.01	64.30
Incl	41.13	42.85	1.72	3.29	194.00
UC-21	148.09	158.20	10.11	2.20	199.90

The company is awaiting assay results from additional drill holes from the El Refugio area (Pad #5). A detailed summary of all available drill hole information will be released when all drill holes from the El Refugio area have been received.

Under its option agreement UC can earn a 50% interest in Planet Explorations Inc.'s (TSXV: PXI) 100% of the Copalquin property. For further information visit UC's website at www.ucresources.net.
