UC RESOURCES EXPANDS LAND POSITION TO 19,269 HECTARES AT COPALQUIN

October 26, 2005 Torreon, Coahuila Mexico; TSXV: UC Management of UC Resources is pleased to announce that the Company has expanded its land position around the Copalquin Property located in Durango State, Mexico. A total of 12,264 additional hectares was acquired by staking bringing the total land package at Copalquin to 19,269 hectares.

As previously, announced UC Resources completed a Phase 1 Exploration Program at the Copalquin Project in early 2005. In summary, drilling during Phase 1 encountered two; widely spaced mineralized zones (referred to as the El Cometa and El Refugio) which exhibit gold and silver mineralization typical of low sulphidation epithermal systems. Details of the Phase 1 Exploration program are contained in News Releases dated December 2004, January, February 2005, and August 10, 2005 and are available on the Company's website www.ucresources.net.

Considering the significant widths of mineralization that were encountered in previous drill programs and the geological similarities with other advanced projects in the northern part of the Sierra Madre (ie.Gammon Lake's Ocampo Project) management believes that Copalquin represents a promising, early stage, "low sulphidation" epithermal prospect. The new staking at Copalquin is contiguous with the original property and covers several gold, silver and copper occurrences reported by the Mexican Department of Mines, which may represent extensions of the epithermal system identified at Copalquin.

Richard Hamelin reports; "This additional land package creates a much larger district for UC and its shareholders. Mexico is and remains an extremely attractive region for international investment of developing mining projects and UC has now acquired and created a much larger district at Copalquin. The historically productive silver and gold returns from past explorers and Phase 1 have given our team great confidence that using modern exploration Phase 2 at Copalquin will bring to light new targets and data that will prove invaluable to the mining industry when looking at this asset of ours."

The technical information contained in this release was prepared by Carl von Einsiedel, P.Geo., a "qualified person" within the meaning of National Instrument 43-101 for the Copalquin Project.

Statements in the release that are "forward-looking statements" are based on current expectations and assumptions that are subject to risks and uncertainties. Actual results could differ materially. We undertake no duty to update any forward-looking statement to conform the statements to actual results or changes in our expectations.
