**INDEPENDENT VERIFICATION SAMPLING PROGRAM CONFIRMS HIGH GRADE DRILL INTERSECTIONS FROM COPALQUIN GOLD SILVER PROPERTY, NORTH WESTERN DURANGO, MEXICO**

December 9<sup>th</sup>, 2005 Torreon, Coahuila Mexico; UC Resources Ltd. (TSXV: UC): Mr. Richard Hamelin is pleased to announce an exploration update on its 19,269 hectare (192 sq km) historically productive gold and silver Copalquin Project in Northwest Durango, Mexico.

As announced October 31, 2005 the company has begun Phase two of its exploration program at Copalquin. On the recommendation of the Company's consultants the initial objective of this program was to verify the drilling results reported by former operator Bell Coast Capital in 1998. Results reported by Bell Coast included the following high grade intersections from the area referred to as the El Cometa Prospect (BCC NR dated June 30 and August 17, 1998):

<b>HOLE #</b>	<b>FROM</b>	<b>TO</b>	<b>INTERVAL</b>	<b>GOLD (Au)</b>	<b>SILVER (Ag)</b>
	<b>metres</b>	<b>metres</b>	<b>metres</b>	<b>grams/ton</b>	<b>grams/ton</b>
<b>EC-02</b>	35.75	39.75	4.00	244.65	2250
<b>EC-08</b>	44.50	46.00	1.50	10.60	301
<b>EC-09</b>	28.80	47.00	18.20	8.55	144
<b>EC-10</b>	32.50	39.40	6.90	17.03	352
<b>EC-11</b>	32.00	32.80	7.50	1.33	55
<b>EC-12</b>	20.00	24.00	4.00	18.19	369
	38.40	39.40	1.00	35.19	609
<b>EC-13</b>	19.50	22.50	3.00	77.57	733
	32.50	34.50	2.00	7.73	106

To verify the results reported by Bell Coast the Company's geological consultants examined the drill core stored on site and selected 70 mineralized sample intervals that had been split and assayed as part of the 1998 program. Split drill core from the selected intervals was sawn into quarters using a diamond blade rock saw. One quarter of the sampled intervals was submitted to ALS Chemex for assay and the remaining quarter was retained in the original core boxes to provide a permanent sample record and provide material for petrographic evaluation.

Assay results reported by ALS Chemex are well within acceptable ranges for precious metal deposits and the verification sampling has established a high degree of confidence in the results reported by Bell Coast. An example of one of the sampled intervals is the mineralization intersected in drill hole EC-09 from 43.0 to 50.0 meters. Bell Coast assay results (1988) and ALS Chemex assay results (2005) for this interval are as follows:

Assay results from drill hole EC-09 for the interval 43.0 to 50.0 meters reported by Bell Coast Capital, 1998:

<u>Interval (m)</u>	<u>Gold (g/t)</u>	<u>Silver (g/t)</u>
43.0 - 44.0	37.300	298.0
44.0 - 45.0	9.440	307.0
45.0 - 46.0	47.760	534.0
46.0 - 47.0	7.260	176.0
47.0 - 48.0	0.160	16.0
48.0 - 49.0	0.075	25.0
49.0 - 50.0	0.210	19.4

Assay results from drill hole EC-09 for the interval from 43.0 to 50.0 meters reported by ALS Chemex, 2005:

<u>Interval (m)</u>	<u>Gold (g/t)</u>	<u>Silver (g/t)</u>
43.0 - 44.0	39.400	407.0
44.0 - 45.0	12.450	231.0
45.0 - 46.0	20.300	320.0
46.0 - 47.0	9.170	235.0
47.0 - 48.0	0.149	21.2
48.0 - 49.0	0.821	79.5
49.0 - 50.0	0.166	25.2

As previously announced the UC Resources 2004 drilling program identified mineralization similar to that at the El Cometa Prospect in an area referred to as the El Refugio Prospect which is located approximately 400 meters west of El Cometa. The main objective of the 2005/2006 program will be to determine if the mineralization encountered at El Refugio is part of the same epithermal system that hosts the El Cometa prospect. Geological personnel are currently selecting drill sites for the upcoming program and drill mobilization is scheduled to commence in late December.

Richard Hamelin reports: "We have made several major accomplishments in the past six months in capitalizing the company and buying out our joint venture partner at Copalquin. This exploration news is very positive for us and with the additional land package that we have added to Copalquin recently, we have created a much larger district for UC and its shareholders. Mexico continues to be an extremely attractive region for international investment of developing mining projects.

The 2005/2006 drill program at Copalquin will be subject to rigorous quality control and quality assurance protocol including blank and reference samples with each batch of assays.

The technical information contained in this release was prepared by Carl von Einsiedel, P.Geo., a "qualified person" within the meaning of National Instrument 43-101 for the Copalquin Project. Mr. von Einsiedel has resigned as an Officer of UC Resources however, Mr. von Einsiedel will continue to manage the exploration work at Copalquin on a consulting basis.

Statements in the release that are "forward-looking statements" are based on current expectations and assumptions that are subject to risks and uncertainties. Actual results could differ materially. We undertake no duty to update any forward-looking statement to conform the statements to actual results or changes in our expectations. The TSX Venture Exchange does not accept responsibility for the adequacy or accuracy of this release.

On behalf of the board of directors,

Richard J. Hamelin, President/CEO/Director
