UC Resources Commences Silver and Gold Production in Mexico

January 30, 2007 UC Resources Ltd.: Torreon, Coahuila, Mexico/Vancouver, British Columbia; Trading Symbol: TSXV: UC (the "Company") UC Resources Ltd. is very pleased to announce that the Company has reached a significant milestone. Commencement of production has begun at the Company's La Yesca project, located in the state of Nayarit, Mexico.

As previously announced in a news release dated January 24th, 2007, the plant's initial start-up was part of the new plant's commissioning process, and was required for testing all of the plant's various components. Minor modifications were made through the course of the past ten days, and now this phase has been successfully completed.

The initial feed rate of the plant is at 50 tons per day, and this will be ramped up to the plant's design rate of 200 tons per day over the course of the next few weeks.

The Company will provide bi-weekly operations reports initially, in an effort to communicate with its shareholders as to the progress of their operating facility.

UC Resources is a Canadian exploration, development and production company focused on silver and gold in Mexico. The company intends to generate cash flow from its production assets as well as explore its expanded flagship exploration property, the 1,500 square kilometre Copalquin project, located in NW Durango State in Mexico. UC Resources has a goal to acquire additional silver and gold quick-to-production assets during the course of the year with a goal of reaching at least 700 tpd feed capacity by the end of 2007.

The Company cautions that it has not completed a feasibility study on its properties and there is no certainty that any of its plans will be economically feasible.

On behalf of the Board,

Richard J. Hamelin
President & CEO
